The invention relates to antisense compounds targetted to a nucleic acid molecule encoding human inhibitor-kappa B-R (also known as I-kappaBR, I'KBR, I-kappa-B-related, ikappabr, miclear factor of kappa light polypeptides gene enhancer in B-cells inhibitor-like 2 and NFKBIL2) to inhibit its expression. Antisense compounds of the invention are useful for treating diseases or conditions associated with the expression of increased cytokine expression, or a result of infection (e.g. bacterial, viral or parasitic). They are useful for diagnostics, therapeutics, prophylaxis e.g. to prevent or delay infection, inflammation or tumour formation, as research reagents and kits and in distinguishing between functions of various members of a biological pathway. They are also useful in antisense therapy. The present sequence is an oligonuclectide targetted to human inhibitor-kappa B-R DNA
                                                                                               Matches
                                                                                                                                            Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New antisense oligonucleotides targeted to nucleic acids encoding inhibitor-kappa B-R, useful for diagnosing or treating diseases associated with expression of inhibitor-kappa B-R, e.g., a heighte immune response or infection.
                                                                                                                                                                                               Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Claim 3; Page 74; 108pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Synthetic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Human; inhibitor-kappa B-R; I-kappaBR; IKBR; I-kappa-B-related; NFKBIL2; ikappab r; antisense; immune response; infection; inflammation; therapy; tumour; prophylaxis; phosphorothicate; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       WPI; 2003-468635/44.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        transforming growth factor beta receptor II; TGF-beta hyperproliferative disorder; breast cancer; autoimmune rheumatoid arthritis; 2'-O-methoxyethyl gapmer;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     18-DEC-2003
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ADC65799;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention comprises antisense oligonucleotides that are targeted to the nucleic acid encoding transforming growth factor beta (TGF-beta) receptor II. The antisense oligonucleotides of the invention are useful for treating: hyperproliferative disorders (e.g. breast cancer), or an autoimmune disorder (e.g. rheumatoid arthritis). The present DNA sequence represents a 2'-O-methoxyethyl gapmer oligonucleotide with a phosphorothioate backbone that is targeted to human TGF-beta receptor II.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New compound having a sequence targeted to a nucleic acid encoding Transforming growth factor beta-receptor II, useful for preparing a composition for treating hyperproliferative disorder e.g., lung, liver,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Homo
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      human; antisense oligonucleotide;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Human
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 03-JAN-2003

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention comprises antisense oligonucleotides which are targeted to the human mdm2 gene. The antisense oligonucleotides of the invention are useful for reducing hyperproliferation of human cells. The antisense oligonucleotides are also useful for treating: hyperproliferative disorders (e.g. cancer), psoriasis, fibrosis, atherosclerosis, or restenosis. The antisense oligonucleotides are also useful for modulating apoptosis, and for increasing expression of p21. The present DNA sequence represents a human mdm2 gene antisense oligonucleotide of the invention. The present sequence contains 2'-methoxyethoxy-residues and has a phosphorothioate backbone.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Novel antisense compound targeted to 5' untranslated region, region, or intron:exon junction of nucleic acid molecule encouseful for treating e.g. cancer, psoriasis or restenosis by
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Miraglia LJ,

```

Novel antisense compound targeted to 5' untranslated region, coding region, or intron:exon junction of nucleic acid molecule encoding mdm2, useful for treating e.g. cancer, psoriasis or restenosis by inhibiting

expression.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention comprises antisense oligonucleotides which are targeted to the human mdm2 gene. The antisense oligonucleotides of the invention are useful for reducing hyperproliferation of human cells. The antisense oligonucleotides are also useful for treating: hyperproliferative disorders (e.g. cancer), psoriasis, fibrosis, atherosclerosis, or restenosis. The antisense oligonucleotides are also useful for modulating appoptosis, and for increasing expression of p21. The present DNA sequence represents a human mdm2 gene antisense oligonucleotide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   antisense gene therapy; apoptosis; hyperproliferative disorder; haematopoletic disorder; autoimmune disorder; viral infection; AIDS; neurological disorder; Alzheimer's disease; Parkinson's disease;

with at least an 8-nucleobase portion of an active site on a nucleic acid complexue encoding caspase 8, a composition comprising the compound and a composition of caspase 8 in cells or tissues with the compound so that compression of caspase 8 in cells or tissues with the compound so that capression of caspase 8 is inhibited) and treating an animal having a condition associated with caspase 8 by administering to the canimal a therapeutic or prophylactic amount of the compound so that capression of caspase 8 is inhibited. The compound, composition and compended are useful for treating a disease or condition associated with caspase 8, such as hyperproliferative, haematopoietic or autoimmune condition such as hyperproliferative, haematopoietic or autoimmune condition such as hyperproliferative, haematopoietic or autoimmune condition infection such as AIDS, neurological disorders (e.g. Alzheimer's disease, Parkinson's disease, amyotrophic lateral sclerosis, cretinitis pigmentosa), blood cell disorders and cancer. They are also cuseful in research and diagnostics for modulating the expression of conference is a caspase-8 targeting antisense conjugonucleotide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to a compound 8-30 nucleobases in length targeted to, and which specifically hybridises with a nucleic acid molecule encoding caspase 8 (a protein involved in apoptosis) and inhibits the expression of caspase 8, i.e. an antisense oligonucleotide. Also included expression of mucleobases in length that specifically hybridises are a compound 8-30 nucleobases in length that specifically hybridises
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New compounds, particularly antisense oligonucleotides targeted to a nucleic acid encoding caspase 8, useful for treating a disease/condition associated with caspase 8, such as hyperproliferative or autoimmune

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      cc initiation codon, coding region, 5. or 3. and genomic flanking regions, cc 5. and 3. intron-exon junctions, or regions within 2-10 nucleotides of cc junctions of genes encoding a polypeptide associated with lung and/or cc nasal airway dysfunction and a second active agent comprising an cc antiinflammatory steroid and ubiquinone. A composition of the invention cc nas antiinflammatory, antiallergic, antiasthmatic, hypotensive, cc immunosuppressive, and cytostatic activity. The composition may have a cc use in antisense gene therapy. The composition is useful for treating or preventing a respiratory, lung or malignant disease or condition, also cc for enhancing the prophylactic or therapeutic respiratory effect of an antiinflammatory steroid in a subject, for reducing or depleting levels cf, or reducing sensitivity to adenosine, reducing levels of adenosine creceptor, producing bronchodilation, increasing levels of this patent is net represented in the printed specification, but was obtained in electronic format directly from WIPO at fre, wipo, int/nub/ished nor remembers.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Query Match

A composition of the invention has antiinflammatory, antiallergic, antiasthmatic, hypotensive, immunosuppressive, and cytostatic activity. The composition may have a use in antisense gene therapy. The composition is useful for treating or preventing a respiratory, lung or malignant disease or condition, also for enhancing the prophylactic or therapeutic respiratory effect of an antiinflammatory steroid in a subject, for reducing levels of adenosine receptor, producing bronchodilation, increasing levels of ubiquinone or receptor, producing bronchodilation, increasing heads of contents of the prophylactic or the second of the prophylacti
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   йусе ли,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to a novel pharmaceutical composition, which has first active agent comprising an oligonucleotide antisense to the initiation codon, coding region, 5' or 3' end genomic flanking regions, or regions within 2-10 nucleotides of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Pharmaceutical composition for treating ailments associated with impaired respiration, has oligo(s) antisense to specific gene(s) or its corresponding RNAs, and glucocorticoid or non-glucocorticoid steroid or
                                                                                                                                                                                                                                                                                                                                          lung surfactant in a subject's tissue, or treating bronchoconstriction, lung inflammation, lung allergies, or a respiratory disease or condition. Note: The sequence data for this patent is not represented in the printed specification, but was obtained in electronic format directly from WIPO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Disclosure; SEQ ID NO 13244; 872pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Miller S,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             CC oligonucleotides are derived from a gene encoding or regulating construction of a target polypeptide associated with lung airway or lung construction or cancer and can be anti-sense to the corresponding mRNA. CC The invention also describes a kit, that comprises: (a) a delivery constructions for adding a carrier and for use of the kit. The composition of instructions for adding a carrier and for use of the kit. The composition of the invention has antiallergic, antiinflammatory, antiasthmatic, confidency of the invention for a manufacture and cytostatic activity, is a composition comprises oligo and is administered to reduce the production composition comprises oligo and is administered to reduce the production or availability, or to increase the degradation of the target mRNA or to reduce the amount of target polypeptide present in the lungs. The conflammation, allergies and/or bronchoconstriction and/or lung inflammation, allergies and/or surfactant hypoproduction are associated with a disease or condition such as pulmonary vascoconstriction, respiratory conflammation, allergies, asthma, impeded respiration, respiratory conflammation, allergies, asthma, impeded respiration, respiratory construction repection, pulmonary infections, bronchities or cancer. The reduced adenosine content of the anti-sense oligos corresponding to thymidines present in the target RNA serves to prevent the breakdown of the manufaction in the target RNA serves to prevent the breakdown of the manufaction in the target RNA serves to prevent the breakdown of the manufaction in the target RNA serves to prevent the breakdown of the manufaction and the product of the anti-sense oligos corresponding to the manufaction and the production and productions between the breakdown of the manufaction and the production of the anti-sense oligon to the action the production of the anti-sense oligon to the serves to the serves to the production of the anti-sense oligon to the action of the anti-sense oligon to the production of the anti-sense oligon
                                                                                                                                                                                                                                                                                                                                                                                                                                           RESULT 683
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Nyce JW,

CC The invention also describes a kit, that comprises: (a) a delivery construction or cancer and can be anti-sense to the corresponding mRNA. CC The invention also describes a kit, that comprises: (a) a delivery constructions for adding a carrier and for use of the kit. The composition of the invention has antiallergic, antiinflammatory, antiasthmatic, consists of the invention has antiallergic, antiinflammatory, antiasthmatic, and beta-adrenergic agonist. The composition is useful for preventing or construction are respiratory, lung or malignant disease. The administered composition comprises oligo and is administered to reduce the production or availability, or to increase the degradation of the target mRNA or to reduce the amount of target polypeptide present in the lungs. The composition control of target polypeptide present in the lungs. The confilammation, allergies and/or bronchoconstriction and/or lung inflammation, allergies and/or surfactant hypoproduction are associated confilammation, allergies and/or surfactant hypoproduction are associated confilammation, allergies and/or surfactant hypoproduction are associated confilammation, allergies, asthma, impeded respiration, respiratory hypertension, emphysema, chronic obstructive pulmonary disease, pulmonary hypertension, emphysema, chronic obstructive pulmonary disease, pulmonary content of the anti-sense oligos corresponding to the oligonucleotides into products that free adenosine into the system of the production of the content of the content of the system of the content of the content of the system of the content of the content of the system of the content

The method is useful for preventing or treating a cc respiratory or lung disease, which involves administering to the airways of a subject an effective amount of an inhibitor. The oligonuclectide is cc of a subject an effective amount of an inhibitor. The oligonuclectide is cc useful for production of a medicament for the prevention and/or treatment of a respiratory or lung disease is chosen from airway inflammation, allergy(ies), asthma, impeded cc respiration, cystic fibrosis (CF), chronic obstructive pulmonary diseases (CODD), allergic rhinitis (AR), acute respiratory distress syndrome cc (ARDS), pulmonary hypertension, lung inflammation, bronchitis, airway construction. The present sequence represents an oligonuclectide of the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       CC The present invention relates to an oligonucleotide anti-sense to e.g., cc initiation codon, coding region with 2-10 nucleotides of 5'-end and 3'-cc end of nucleic acid target comprising gene(s) chosen from e.g. cc interleukin (IL)-4 receptor, IL-5 receptor or salts of the cc oligonucleotide and optionally surfactant operatively linked to the cligonucleotide. The method is useful for preventing or treating a cc respiratory or lung disease, which involves administering to the airways of a subject an effective amount of an inhibitor. The oligonucleotide is useful for production of a medicament for the prevention and/or treatment cc fa respiratory or lung disease. The respiratory or lung disease is cc hosen from airway inflammation, allergy(ies), asthma, impeded cc respiration, cystic fibrosis (CF), chronic obstructive pulmonary diseases (COPD), allergic rhinitis (AR), acute respiratory distress syndrome (CORDS), pulmonary hypertension, lung inflammation, bronchitis, airway inflammation, allergy (ies), asthma in the content of the content o

```
The present sequence represents a chimeric antisense oligonucleotide CC targeted to human microsomal prostaglandin E2 synthase (mpGES-1). The CC human mpGES-1 gene is located on chromosome 9, more specifically to 9934.3. The present invention also describes: (1) antisense compounds, CC having a sequence comprising 8-30 bp targeted to a nucleic acid encoding CC mpGES-1, which specifically hybridise with the nucleic acid mpGES-1 and CC inhibits its expression; (2) a method of inhibiting the expression of CC mpGES-1 in cells or tissues; and (3) a method of treating an animal CC having a disease or condition associated with mpGES-1 mpGES-1 chimeric CC antisense oligonucleotides and antisense compounds have cytostatic; CC antidiabetic, immunomodulator, cardiant, neuroprotective, antiarthritic, vasotropic, CC ophthalmological, immunomodulatory and cardiovascular activities, and can be used for preparing a composition for treating a disease or CC condition associated with mpGES-1 e.g., inflammation, Alzheimer's CC condition associated with mpGES-1 e.g., inflammation, Alzheimer's condition for treating a disease or condition associated with mpGES-1 e.g., inflammation, Alzheimer's condition for treating a disease or condition associated with mpGES-1 e.g., inflammation, Alzheimer's condition for treating a disease or condition for treating a disease or condition associated with mpGES-1 e.g., inflammation, Alzheimer's condition for treating a disease or con

targeted to human microsomal prostaglandin E2 synthase (mPGES-1). The human mPGES-1 gene is located on chromosome 9, more specifically to 9934.3. The present invention also describes: (1) antisense compounds, having a sequence comprising 8-30 bp targeted to a nucleic acid encoding mPGES-1, which specifically hybridise with the nucleic acid mPGES-1 and inhibits its expression; (2) a method of inhibiting the expression of mPGES-1 in cells or tissues; and (3) a method of treating an animal having a disease or condition associated with mPGES-1. MPGES-1 chimeric
                                                                                                                                                                                                                                                                                                                                                                                                                                          New antisense compound, having a sequence targeted to a nucleic acid encoding mPGES-1, useful for preparing a composition for treating e.g., inflammation, Alzheimer's disease, arthritis, diabetes, cancer or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        modified_base

The antisense compound can be used for preparing a composition for treating a disease or condition associated with mPGES-1 e.g., inflammation, Alzheimer's disease, arthritis, diabetes, cancer, ischaemia or reperfusion injury, or ophthalmic, immunological, cardiovascular or neurological disorder.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       chimeric; antisense oligonucleotide; phosphorothioate; human; microsomal prostaglandin E2 synthase; mpGES-1; mpGES-1 inhibitor; microsomal prostaglandin E2 synthase; mpGES-1; mpGES-1 inhibitor; cytostatic; antidiabetic; immunomodulator; cardiant; neuroprotective; antiinflammatory; neuroprotective; antiarthritic; vasotropic; ophthalmological; immunomodulatory; cardiovascular; gene therapy; inflammation;

The CC human mpGES-1 gene is located on chromosome 9, more specifically to CC 934.3. The present invention also describes: (1) antisense compounds, CC mpGES-1, which specifically hybridise with the nucleic acid encoding CC mpGES-1, which specifically hybridise with the nucleic acid mpGES-1 and CC mpGES-1 in cells or tissues; and (3) a method of traating an animal CC having a disease or condition associated with mpGES-1. MpGES-1 chimeric CC antidiabetic, immunomodulator, cardiant, neuroprotective, antidiabetic, immunomodulator, cardiant, neuroprotective, ophthalmological, immunomodulatory and cardiovascular activities, and can be used for preparing a composition for treating a disease or CC condition associated with mpGES-1 e.g., inflammation, Alzheimer's CC disease, arthritis, diabetes, cancer, ischaemia or reperfusion injury, or ophthalmic, immunological, cardiovascular or neurological disorder.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present sequence represents a chimeric antisense oligonucleotide CC targeted to human microsomal prostaglandin E2 synthase (mpGES-1). The CC human mpGES-1 gene is located on chromosome 9, more specifically to CC 934.3. The present invention also describes: (1) antisense compounds, CC chaving a sequence comprising 8-30 bp targeted to a nucleic acid encoding CC mpGES-1, which specifically hybridise with the nucleic acid mpGES-1 and CC inhibits its expression; (2) a method of inhibiting the expression of CC mpGES-1 in cells or tissues; and (3) a method of treating an animal CC having a disease or condition associated with mpGES-1. MpGES-1 chimeric CC antiscense oligonucleotides and antisense compounds have cytostatic, CC antidiabetic, immunomodulator, cardiant, neuroprotective, and can attisense conjuctal, immunomodulatory and cardiovascular activities, and can be used as mpGES-1 inhibitors and in gene therapy. The antisense compound CC can be used for preparing a composition for treating a disease or CC condition associated with mpGES-1 e.g., inflammation, Alzheimer's CC disease, arthritis, diabetes, cancer, ischaemia or reperfusion injury, or ophthalmic, immunological, cardiovascular or neurological disorder.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Query Match

microsomal prostaglandin E2 synthase; mPGES-1; mPGES-1 inhibitor; microsomal prostaglandin E2 synthase inhibitor; cytostatic; antidiabetic; immunomodulator; cardiant; neuroprotectie; antiinflammatory; neuroprotective; nootropic; antiarthritic; vasotropic; ophthalmological; immunomodulatory; cardiovascular; gene therapy; inflammation; hlzheimer's disease; arthritis; diabetes; cancer; ischaemia; reperfusion injury; ophthalmic disorder; immunological disorder;
                                antidiabetic, immunomodulator, cardiant, neuroprotective, asotropic, antidiabetic, immunomodulatory nootropic, antiarthritic, vasotropic, antiinflammatory, neuroprotective, nootropic, antiarthritic, vasotropic, ophthalmological, immunomodulatory and cardiovascular activities, and can be used as mpGES-1 inhibitors and in gene therapy. The antisense compound can be used for preparing a composition for treating a disease or condition associated with mpGES-1 e.g., inflammation, Alzheimer's condition associated with mpGES-1 e.g., inflammation, and condition associated with mpGES-1 e.g., inflamm
                                                                                                                                                                                                                   targeted to human microsomal prostaglandin E2 synthase (mPGES-1). The human mPGES-1 gene is located on chromosome 9, more specifically to 9334.3. The present invention also describes: (1) antisense compounds, having a sequence comprising 8-30 bp targeted to a nucleic acid encoding mPGES-1, which specifically hybridise with the nucleic acid mPGES-1 and inhibite its expression; (2) a method of inhibiting the expression of mPGES-1 in cells or tissues; and (3) a method of treating an animal having a disease or condition associated with mPGES-1. MPGES-1 chimeric antisense oligonucleotides and antisense compounds have cytostatic, antidiabetic, immunomodulator, cardiant, neuroprotective,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Human mPGES-1 chimeric antisense oligonucleotide SEQ

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               all cytidine
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     e.g.,
```

disease, arthritis, diabetes, cancer, iscl ophthalmic, immunological, cardiovascular

The invention relates to oligonucleotides anti-sense to an initiation codon, coding region, 5' or 3' intron-exon junction, intron or region with 2-10 nucleotides of the 5'-end or 3'-end of a nucleic acid target chosen from a gene encoding interleukin (II)-4 receptor, interleukin (II)-5 receptor, CCR1, CCR3, Ectaxin-1, RANTES, MCP4, CD23, ICAM, VCAM, tryptase a, tryptase b, PDE4 A, PDE4 B, PDE4 C or PDE4 D. The invention also relates to a method of screening a candidate compound that binds to one or more nucleic acid target(s) or expressed product(s), for the prevention and/or treatment of a respiratory or lung disease. The oligonucleotides are useful for reducing or inhibiting expression of a

(II)

The oligonucleotides are useful for preventing or treating a respiratory or lung disease. The respiratory or lung disease is associated with hyper-responsiveness to and/or increased levels of, adenosine and/or levels of adenosine A receptor(s), and/or asthma and/or lung allergies associated with respiratory or lung disease inflammation or an inflammatory disease. The respiratory or lung disease is chosen from airway inflammation, allergy, asthma, impeded respiration, cystic fibrosis (CP), chronic obstructive pulmonary disease (CPD) allergic rhinitis, acute respiratory distress syndrome, pulmonary hypertension, lung inflammation, bronchitis, airway obstruction or the content of t

CC -5 receptor, CCR1, CCR3, Botaxin-1, RANTES, MCP4, CD23, ICAM, VCAM,

CC tryptase a, tryptase b, PDE4 A, PDE4 B, PDE4 C. TO PDE4 D. The invention

CC also relates to a method of screening a candidate compound that binds to

CC one or more nucleic acid target(s) or expressed product(s), for the

CC prevention and/or treatment of a respiratory or lung disease. The

CC oligonucleotides are useful for reducing or inhibiting expression of a

CC gene or mRNA encoding interleukin-4 receptor, interleukin-5 receptor,

CC CCR1, CCR3, Botaxin-1, RANTES, MCP4, CD23, ICAM, VCAM, tryptase a,

CC tryptase b, PDE4 A, PDE4 B, PDE4 C, or PDE4 D. The oligonucleotides are

CC tryptase b, PDE4 A, PDE4 B, PDE4 C, or PDE4 D. The oligonucleotides are

CC tryptase b, and/or lasting a respiratory or lung disease. The

CC respiratory or lung disease is associated with hyper-responsiveness to

CC and/or increased levels of, adenosine and/or levels of adenosine A

CC receptor(s), and/or asthma and/or lung allergies associated with

CC inflammation or an inflammation, allergy, asthma, impeded respiration,

CC setic fibrosis (CF), chronic obstructive pulmonary disease (COPD),

CC oligonucleotide of the

CC bronchoconstriction. This sequence represents an oligonucleotide of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Query Match

Identifying a subject at risk of breast cancer by detecting the presence

or absence diagnosing,

preventing

of one or more nucleotide polymorphic variations, useful for

and/or treating breast

cancer.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to a novel method for identifying a subject at risk of breast cancer which comprises detecting the presence or absence of one or more polymorphic variations associated with breast cancer in a nucleic acid sample from a subject. The method of the invention has cytostatic applications and may be useful for identifying a risk of breast cancer,

useful for down-regulating the expression of an endogenous mammalian target gene and therefore in the treatment of any disease or condition that responds to modulation of gene expression or activity in a cell, tissue or organism. The disease or condition may include pulmonary disease such as restenosis, atherosclerosis, Alzheimer's disease, parkinson's disease, epilepsy, dementia, huntington's disease or amyotrophic lateral sclerosis. Purthermore, the siNA may be utilised for gene therapy applications. The current sequence is that of the siNA DNA-RNA hybrid of the invention.
                                                                                                                                                                                                                                                                                                     The invention relates to a double-stranded short interfering nucleic ((6iNA) molecule that down-regulates expression of an endogenous mamma trarget gene comprising one or more chemical modifications and each stof the double-stranded siNA comprises about 21 nucleotides. The siNA the invention demonstrates antiarteriosclerotic, neuroprotective, nootropic, antiparkinsonian and anticonvulsant activities and may be

Novel isolated or purified polypeptide encoded by genes associated with intestinal epithelium or M cell development, differentiation or function useful for treating autoimmune diseases and infectious diseases. function

Disclosure; SEQ ID NO 844; 152pp; English.

The invention comprises DNA sequences which are associated with intestinal epithelium and peyer's patch M cells. The DNA sequences of the invention are useful for assessing, modifying, modulating or regulating intestinal epithelium or M cell development. The DNA sequences of the invention are also useful in the treatment of: inflammatory bowel glutenenteropathy, of the

                                            The present invention describes a restriction primer for eukaryotic short interspersed repeated sequences (SINE), which has one or more additional bases that are a mismatch to, or are unrelated to, the 3'-terminal end of the SINE. The annealing temperature of the primer to the DNA sequence is kept higher than the fusion temperature of the primer during polymerase chain reaction (PCR). The PCR fragments obtained are subjected to electrophoresis to obtain a fingerprint. By comparing the polymorphs from the electrophoresis band pattern, eukaryotic individuals are city of the primer is used for amplifying a eukaryotic descriptionucleic acid (DNA) sequence, pinched between SINE sequences by colymerase chain reaction (PCR) fingerprinting. In particular it may be used individual identification of humans for medical and legal capplications and ecological studies. DNA specimens in traces applications and ecological studies. DNA specimens in traces chain reaction (PCR).

CC approximately 10 ng in mass) can be used for individual discrimination of eukaryotes using the primer in a polymerase chain reaction (PCR).

CC ALZ25143 to ALZ25191 represent specifically claimed examples of primers
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              disease, multiple sclerosis, allergy, asthma and diabetic mellitus), diseases or disorders of the immune system, hypersensitivity, anaphylaxis, and blood group incompatibility. The present DNA sequence represents a PCR primer that was used to amplify an intestinal epithelium/peyer's patch M cell-associated DNA sequence of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Human; short interspersed repetitive element; SINE; PCR; primer; Oncorhynchus; restriction primer; short interspersed repeated sequence; eukaryote, restricted polymerase chain reaction fingerprinting; identification; DNA specimen; discrimination; ss.

                                                                                                                                                                                          The present invention describes a restriction primer for eukaryotic short interspersed repeated sequences (SINB), which has one or more additional bases that are a mismatch to, or are unrelated to, the 3'-terminal end of the SINB. The annealing temperature of the primer to the DNA sequence is kept higher than the fusion temperature of the primer during polymerase chain reaction (PCR). The PCR fragments obtained are subjected to electrophoresis to obtain a fingerprint. By comparing the polymorphs from the electrophoresis band pattern, eukaryotic individuals are distinguished. The primer is used for amplifying a eukaryotic deoxyribonucleic acid (DNA) sequence, pinched between SINB sequences by polymerase chain reaction (PCR) fingerprinting. In particular it may be used individual identification of humans for medical and legal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Human, short interspersed repetitive element; SINE; PCR; primer; Oncorhynchus; restriction primer; short interspersed repeated sequence; eukaryote; restricted polymerase chain reaction fingerprinting; identification; DNA specimen; discrimination; 88.
                                                                                                                        applications and ecological studies. DNA specimens in traces (approximately 10 ng in mass) can be used for individual discrimination of eukaryotes using the primer in a polymerase chain reaction (PCR).

AAZ25143 to AAZ25191 represent specifically claimed examples of primers
                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Restriction primer for distinguishing individuals with short interspersed repeated sequence of eukaryotes by restricted polymerase chain reaction
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Synthetic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Human short interspersed repetitive element PCR primer #15
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               AAZ25157 standard; DNA; 22

                                                                                                                       멂
                                                                                                                                                 Ś
                                                                                                                                                                                                                                                                                The present invention describes a restriction primer for eukaryotic short contemporared repeated sequences (SINE), which has one or more additional the bases that are a mismatch to, or are unrelated to, the 3'-terminal end of the SINE. The annealing temperature of the primer to the DNA sequence is comparing the primer to the DNA sequence is comparing the polymorphs from the electrophoresis to obtain a fingerprint. By comparing the polymorphs from the electrophoresis band pattern, eukaryotic individuals are the electrophoresis band pattern, eukaryotic individuals are constituted in the primer is used for amplifying a eukaryotic deoxyribonucleic acid (DNA) sequence, pinched between SINE sequences by colymerase chain reaction (PCR) fingerprinting. In particular it may be used individual identification of humans for medical and legal applications and ecological studies. DNA specimens in traces applications and ecological studies. DNA specimens in traces chain reaction (PCR).

                                                                                                                                                                                                                                                                                                                                                                                                                                   片
                                                                                                                                                                                                                                                                                                                     S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present invention describes a restriction primer for eukaryotic short interspersed repeated sequences (SINE), which has one or more additional bases that are a mismatch to, or are unrelated to, the 3'-terminal end of the SINE. The annealing temperature of the primer to the DNA sequence is kept higher than the fusion temperature of the primer during polymerase chain reaction (PCR). The PCR fragments obtained are subjected to celectrophoresis to obtain a fingerprint. By comparing the polymorphs from CC distinguished. The primer is used for amplifying a eukaryotic descriptionucleic acid (DNA) sequence, pinched between SINE sequences by colymerase chain reaction (PCR) fingerprinting. In particular it may be used individual identification of humans for medical and legal applications and ecological studies. DNA specimens in traces (approximately 10 ng in mass) can be used for individual discrimination of furnishing the primer in a column and the primer in traces.
                                                                                                                                                                                                                                                                                                                                                            Matches
                                                                                                                                                                                                                                                                                                                                                                                              Query Match

                                                                                                                                                                                                                                                                                                                                                                   RESULT 702
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present invention describes a restriction primer for eukaryotic short interspersed repeated sequences (SINE), which has one or more additional bases that are a mismatch to, or are unrelated to, the 3' terminal end of the SINE. The annealing temperature of the primer to the DNA sequence is kept higher than the fusion temperature of the primer during polymerase chain reaction (PCR). The PCR fragments obtained are subjected to electrophoresis to obtain a fingerprint. By comparing the polymorphs from the electrophoresis band pattern, eukaryotic individuals are distinguished. The primer is used for amplifying a eukaryotic deoxyribonucleic acid (DNA) sequence, pinched between SINE sequences by polymerase chain reaction (PCR) fingerprinting. In particular it may be used individual identification of humans for medical and legal applications and ecological studies. DNA specimens in traces (approximately 10 ng in mass) can be used for individual discrimination of the primer in a polymerase chain reaction (DCP)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sequence 22
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Claim 6; Page 4; 17pp; Japanese

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present invention describes a restriction primer for eukaryotic short CC interspersed repeated sequences (SINE), which has one or more additional CC bases that are a mismatch to, or are unrelated to, the 3'-terminal end of the SINE. The annealing temperature of the primer to the DNA sequence is chain reaction (PCR). The PCR fragments obtained are subjected to claim reaction (PCR). The PCR fragments obtained are subjected to clectrophoresis to obtain a fingerprint. By comparing the polymorphs from the electrophoresis band pattern, eukaryotic individuals are claiminguished. The primer is used for amplifying a eukaryotic deoxyribonucleic acid (DNA) sequence, pinched between SINE sequences by colymerase chain reaction (PCR) fingerprinting. In particular it may be cused individual identification of humans for medical and legal capplications and ecological studies. DNA specimens in traces of eukaryotes using the primer in a polymerase chain reaction (PCR).

CC ALRZ5143 to ARZ55191 represent specifically claimed examples of primers from the pracet in a polymerase chain reaction (PCR).

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present invention describes a restriction primer for eukaryotic short clinterspersed repeated sequences (SINE), which has one or more additional CC bases that are a mismatch to, or are unrelated to, the 3'-terminal end of the SINE. The annealing temperature of the primer to the DNA sequence is chain reaction (PCR). The PCR fragments obtained are subjected to clearrophoresis to obtain a fingerprint. By comparing the polymorphs from CC the electrophoresis band pattern, eukaryotic individuals are clearing interprints obtained are subjected to comparing the polymorphs from CC distinguished. The primer is used for amplifying a eukaryotic deoxyribonucleic acid (DNA) sequence, pinched between SINE sequences by colymerase chain reaction (PCR) fingerprinting. In particular it may be used individual identification of humans for medical and legal CC applications and ecological studies. DNA specimens in traces of eukaryotes using the primer in a polymerase chain reaction (PCR). ARZ25141 to ARZ25191 represent specifically claimed examples of primers
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               IJ

The present invention interspersed repeated

describes a restriction sequences (SINE), which

primer for eukaryotic short has one or more additional

The present invention describes a restriction primer for eukaryotic short interspersed repeated sequences (SINE), which has one or more additional bases that are a mismatch to, or are unrelated to, the 3'-terminal end of the SINE. The annealing temperature of the primer to the DAN sequence is kept higher than the fusion temperature of the primer during polymerase chain reaction (PCR). The PCR fragments obtained are subjected to electrophoresis to obtain a fingerprint. By comparing the polymorphs from the electrophoresis band pattern, eukaryotic individuals are distinguished. The primer is used for amplifying a eukaryotic deoxyribonucleic acid (DNA) sequence, pinched between SINE sequences by

Restriction primer for distinguishing individuals with short interspersed repeated sequence of eukaryotes by restricted polymerase chain reaction

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                bases that are a mismatch to, or are unrelated to, the 3'-terminal end of the SINE. The annealing temperature of the primer to the DNA sequence is kept higher than the fusion temperature of the primer during polymerase chain reaction (PCR). The PCR fragments obtained are subjected to electrophoresis to obtain a fingerprint. By comparing the polymorphs from the electrophoresis band pattern, eukaryotic individuals are distinguished. The primer is used for amplifying a eukaryotic destringuished. The primer is used for amplifying a eukaryotic destringuished acid (NDA) sequence, pinched between SINE sequences by polymerase chain reaction (PCR) fingerprinting. In particular it may be used individual identification of humans for medical and legal
                                                                                                                                                                                                                                                                                                                                                                                                                                                             Human; short interspersed repetitive element; SINE; PCR; primer; Oncorhynchus; restriction primer; short interspersed repeated sequence; eukaryote; restricted polymerase chain reaction fingerprinting; identification; DNA specimen; discrimination; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           applications and ecological studies. DNA specimens in traces (approximately 10 ng in mass) can be used for individual discrimination of eukaryotes using the primer in a polymerase chain reaction (PCR).

AAZ25143 to AAZ25191 represent specifically claimed examples of primers
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Sequence
                                                                                                                                                                                                                                                                                                                                                             28-JUN-1999
                                                                                                                                                                                                                                                                                                                                                                                                                                  Synthetic

The present invention describes a restriction primer for eukaryotic short clinterspersed repeated sequences (SINE), which has one or more additional bases that are a mismatch to, or are unrelated to, the 3'-terminal end of the SINE. The annealing temperature of the primer to the DNA sequence is kept higher than the fusion temperature of the primer during polymerase chain reaction (PCR). The PCR fragments obtained are subjected to electrophoresis to obtain a fingerprint. By comparing the polymorphs from the electrophoresis band pattern, eukaryotic individuals are distinguished. The primer is used for amplifying a eukaryotic deoxyribonucleic acid (DNA) sequence, pinched between SINE sequences by colymerase chain reaction (PCR) fingerprinting. In particular it may be used individual identification of humans for medical and legal cused individual identification of humans for medical and legal capplications and ecological studies. DNA specimens in traces (approximately 10 ng in mass) can be used for individual discrimination of eukaryotes using the primer in a polymerase chain reaction (PCR).

ANAZ25143 to ANZ25191 represent specifically claimed examples of primers
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              polymerase chain reaction (PCR) fingerprinting. In particular it may be used individual identification of humans for medical and legal applications and ecological studies. May speciment in traces (approximately 10 mg in mass) can be used for individual discrimination of eukaryotes using the primer in a polymerase chain reaction (PCR). AAZZ5143 to AAZZ5191 represent specifically claimed examples of primers
                                                                                                                                                                                                                                                                                                                                                                               Claim 6;
                                                                                                                                                                                                                                                                                                                                                                                                                                       Restriction primer for distinguishing individuals with short interspersed repeated sequence of eukaryotes by restricted polymerase chain reaction
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      WPI; 1999-583348/50.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       QS
                                        The present invention describes a restriction primer for eukaryotic short CC interspersed repeated sequences (SINE), which has one or more additional CC bases that are a mismatch to, or are unrelated to, the 3'-terminal end of CC the SINE. The annealing temperature of the primer to the DNA sequence is kept higher than the fusion temperature of the primer during polymerase CC chain reaction (PCR). The PCR fragments obtained are subjected to electrophoresis to obtain a fingerprint. By comparing the polymorphs from the electrophoresis band pattern, eukaryotic individuals are cdistinguished. The primer is used for amplifying a eukaryotic deoxyribonucleic acid (DNA) sequence, pinched between SINE sequences by CC deoxyribonucleic acid (DNA) sequence, pinched between SINE sequences by CC used individual identification of humans for medical and legal applications and ecological studies. DNA specimens in traces (approximately 10 ng in mass) can be used for individual discrimination of eukaryotes using the primer in a polymerase chain reaction (PCR).

                                                                                                                                      S
                                                                                                                                                                                                                                                                       The present invention describes a restriction primer for eukaryotic short clinterspersed repeated sequences (SINE), which has one or more additional CD bases that are a mismatch to, or are unrelated to, the 3'-terminal end of CD the SINE. The annealing temperature of the primer to the DNA sequence is contain reaction (PCR). The PCR fragments obtained are subjected to CD the interpretation (PCR). The PCR fragments obtained are subjected to CD the electrophoresis to obtain a fingerprint. By comparing the polymorphs from CD the electrophoresis band pattern, eukaryotic individuals are CD described. The primer is used for amplifying a eukaryotic cdeoxyribonucleic acid (DNA) sequence, pinched between SINE sequences by polymerase chain reaction (PCR) fingerprinting. In particular it may be used individual identification of humans for medical and legal CD applications and ecological studies. DNA specimens in traces applications are ecological studies. DNA specimens in traces constituted using the primer in a polymerase chain reaction (PCR). ARZES143 to ARZES191 represent specifically claimed examples of primers constituted to primers.
                                                                                                            뮍

                                                                                                                                                                                                                                          nootropic, antiparkinsonian and anticonvulsant activities and may be useful for down-regulating the expression of an endogenous mammalian that responds to modulation of gene expression or activity in a cell, tissue or organism. The disease or condition may include pulmonary diseases such as restenosis, atherosclerosis, Alzheimer's disease, parkinson's disease, epilepsy, dementia, huntington's disease or amyotrophic lateral sclerosis. Furthermore, the siNA may be utilised for gene therapy applications. The current sequence is that of the siNA DNA-RNA hybrid of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Mcswiggen ,

                                                                                                                                                                                                                                                                                                                                                                                             The present sequence is a PCR primer for exon 4 of the human steroidogenesis acute regulatory protein (hStAR) gene. The hStAR gene can be analysed for mutations to detect (e.g. prenatally) genetic defects associated with congenital lipoid adrenal hyperplasia (CAH), or its transmission to children. CAH can be treated by protein or gene replacement therapy, which can also be used to prevent or treat hypercholesterolaemia. A human adrenal cortex cDNA library was screened with a mouse StAR probe to isolate a 1.6 kb insert, including an ORF for a 285 residue protein. When it was cloned into pSPORT and expressed in COS-1 cells cotransfected with pP450scc abd pADX, it increased the level of pregnenolone synthesis from cholesterol or 20-alpha-hydroxycholesterol

The products can be used for the detection and treatment of Werner's syndrome (WS), an autosomal recessive disorder a complex phenotype, as well as related diseases

CC The invention relates to the human ABC1 cholesterol transporter protein CC (B38082) and to nucleic acid sequences (C69120) which encode it. ABC1 is CC a member of the ATP-binding cassette (ABC transporter) superfamily of CC intracellular cholesterol trafficking in moncytes and fibroblasts, being CC involved in cholesterol efflux from the cell. The gene are associated control to the collection of the co

CC probes used to screen for homozygous deletions. The region of deletion in CC cell line ASPC-1, and thereby to map deletions. The region of deletion in CC ASPC-1 was found to include a portion of the gene encoding a protein CC ASPC-1 was found to include a portion of the gene encoding a protein CC kinase, MKK4. MKK4 (also known as JNKK1 and SRK1) may be involved in a CC MAPK (mitogen-activated protein kinase) pathway for the signal CC transduction of cytokine-induced and stress-induced apoptosis. MKK4 is CC also involved in suppressing a variety of tumours. MKK4 is a dual CC also involved in suppressing a variety of tumours. MKK4 is a dual cc as MKK4 and p38 MAPKs are activated via dual phosphorylation on CC MAPKS. The JNK and p38 MAPKs are activated via dual phosphorylation on CC deletions often involve loss of a single allele, which is known as loss of heterozygosity (LOH), and the remaining allele is presumed to be non-CC deletions often involve loss of a single allele, which is known as loss CC deletions often involve loss of a single allele, which is known as loss CC deletions often involve loss of a single allele, which is known as loss CC deletions often involve loss of a single allele, which is known as loss CC deletions often involve loss of a single allele. Which is known as loss CC deletions often involve loss of a pre-axisting inherited mutation, or CC involve homozygous deletion of both alleles. LOH events commonly involve consorve because of a pre-axisting inherited mutation are cCC deletions spanning many megabases of DNA, while homozygous deletions are cCC deletions spanning many megabases of DNA, while homozygous deletions are cCC deletions spanning many megabases of DNA, while homozygous deletions are cCC deletions of the MKK4 locus or its expression product in a tissue sample cCC deletions of a predisposition to breast, pancreatic, colorectal and cCC deletion of the MKK4 locus or its expression product in a tissue sample cCC deletion for cancer to the deletion save been found in cell cell t
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    breast cancer; pancreatic cancer; colorectal cancer; testicular cancer; drug screening; gene therapy; protein replacement therapy; mimetic; sequence tagged site; STS; probe; deletion; mapping; PCR; primer; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           drug screening;

                                                                                                                                                                                                                                                                                                                                                                                                      primer and a fluorescence-labelling probe. The method involves carrying out PCR on sample DNA, containing a drug-metabolising enzyme gene, together with PCR buffer, the normal forward primer, the reverse primer and the fluorescence-labelling probe (step A); and carrying out PCR on the sample DNA together with PCR buffer, the mutated forward primer, the reverse primer and the fluorescence-labelling probe (step B), and a step of comparing the result of step a with that of step b. The present sequence is a primer for human CYP2C18i, which was used to illustrate the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Detection of gene polymorphism of drug-metabolizing enzymes useful for diagnosis and testing comprises carrying out polymerase chain reaction
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              19-MAR-1999;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present invention relates to methods for distinguishing between individuals homozygous for and therefore afflicted with Van Buchem's disease, individuals heterozygous for and therefore carriers of Van Buchem's disease and individuals who are not afflicted with Van Buchem's disease comprise identifying a large genomic deletion in chromosome 17 at 17q21. The method is useful for identifying individuals who are afflicted with or carriers of diseases associated with one or more genomic deletion, particularly Van Buchem's disease, which is a rare autosomal recessive disorder that results in a bone dysplasia referred to a craniotubular hypertosis. The present sequence is a PCR primer used to amplify 92Kb gene fragment in human chromosome 17 at 17q21
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           by determine chromosome
                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Human; Van Buchem's disease; genomic deletion; craniotubular hypertosis; autosomal recessive disorder; chromosome 17; chromosome 17q21; bone dysplasia; 92Kb gene fragment; PCR primer; 8s.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Example
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          AAD31457
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Sequence
The present invention relates to methods for distinguishing between individuals homozygous for and therefore afflicted with Van Buchem's disease, individuals heterozygous for and therefore carriers of Van Buchem's disease and individuals who are not afflicted with Van Buchems's disease comprise identifying a large genomic deletion in chromosome 17 at 17g21. The method is useful for identifying individuals who are afflicted
                                                                                                                              Methods for identifying subjects who are afflicted with or carriers of diseases associated with genomic deletion(s), e.g. Van Buchem's disease, by determining the presence of a deletion in the 92 kb region of human chromosome 17 at 17g21.
                                                                                                                                                                                                                                                                                                           28-JUL-2000;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              with or carriers of diseases associated with one or more genomic deletion, particularly Van Buchem's disease, which is a rare autosomal recessive disorder that results in a bone dysplasia referred to a craniotubular hypertosis. The present sequence is a PCR primer used to amplify 92Kb gene fragment in human chromosome 17 at 17q21
                    The invention relates to a new composition which comprises at least one anti-DNA polymerases (anti-DNAP) antibody and/or at least one anti-DNAP polymerases (anti-DNAP) antibody, and at least one single strand binding protein (SSB) or at least two different SSBs. The compositions are useful for nucleic acid synthesis reactions or are generated during nucleic acid synthesis. The methods are useful for synthesis reactions. The methods are useful for synthesis to be used in amplifying nucleic acid molecules, in reverse transcription concleic acid molecules and in coupled or uncoupled reverse transcription/amplification. The present sequence is used in the exemplification of the present invention.
                                                                                                                                                                                                                         New compositions comprising one or more anti-reverse transcriptase antibodies, anti-DNA polymerases or single strand binding proteins, useful for synthesizing nucleic acids.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Sequence
                                                                                                                                                                                                                                                                                                                                                                      05-SEP-2002;

The antisense inhibitors can be used in a method of the invention, for inhibiting cell proliferation. They can also be used in methods for inducing sensitivity to radiation and DNA damaging chemotherapeutics in an individual and in a method for prolonging survival in an individual with cancer. The methods and antisense molecules are useful for inhibiting cell proliferation, especially cancerous cell proliferation, for inducing sensitivity to radiation and DNA damaging chemotherapeutics in individuals and for prolonging survival in an individual with cancer. Kits for carrying out the methods may be used to diagnose and/or treat cancer and for addinctive there are there we are the services of the s
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Antisense radiation

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 such as cancer, autoimmune disease, arthritis, graft rejection, inflammatory bowel disease, proliferation induced after medical procedures such as surgery, angioplasty etc. in humans and animals
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The sequence represents the human Rad51 antisense oligonucleotide, AS8. The antisense oligonucleotide its used to study down-regulation of Rad5 protein in human brain, breast and prostate cells. Rad51 protein is defective in repair of damaged DNA, genetic recombination and the recombinational repair of DNA lesions, and plays a central role in cancer. Inhibiting cell proliferation involves administering to a cell
                                                                                                                                                                                                                                                                                        Tumour cell proliferation, RadS1 inhibitor; p53 protein; premature aging; hyperproliferative disorder; hodgkin's disease; squamous cell carcinoma; leukaemia; autoimmune disease; cancer; graft rejection; angioplasty; inflammatory bowel disease; immunosuppressive; gene therapy; arthritis;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           AAD43247;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to a method for inhibiting or reducing tumour cell proliferation in an individual in vivo. The method comprising contacting a tumour cell in vivo with a Rad51 inhibitor and a polynucleotide capable of expressing functional p53 protein. The method is useful for inhibiting or reducing tumour cell proliferation in an individual in vivo. The method is useful for treating hyperproliferative disorders, especially cancer (such as Hodgkin's disease, squamous cell carcinoma and leukaemia), premature aging, autoimmune disease, arthritis, graft rejection, inflammatory bowel disease, and proliferation induced after medical procedures such as surgery and angioplasty. The invention is useful in gene therapy. The present sequence is an antisense
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              26-JAN-2001; 2001US-00771355

of human cytochrome p4501A2 gene poof metabolic activity polymorphism.

polymorphism

useful in

WPI; 1996-087678/09

AAT10907-T10910 are PCR primers used for the amplification of untranslated fragment of the the human cytochrome P4501A2 gene

gene

including

a

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      diastolic heart failure in a human comprises detecting the presence or absence of an allelic variant at position 24941 of the heart failure associated gene appearing as ADH26544 (NUNC93B1, encoding a possible 12 transmembrane receptor protein) in the sample, where the presence or absence of the allelic variant is indicative of a predisposition to left ventricular diastolic heart failure in the human. The method further comprises determining the genotype of the human at position 24941 of ADH26544. The method is useful for diagnosing predisposition to left ventricular diastolic and systolic heart failure. The hUNC93B1 gene is located on chromosome 11q13. The present sequence is a PCR primer used to analyse the polymorphisms in the human heart failure associated gene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             bisgnosing predisposition to left ventricular diastolic heart failure a human comprises detecting the presence or absence of an allelic variat position 24941 of hUNC93B1 gene.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 WPI;

           The invention relates to the isolation of polymorphic repeat sequences having the sequence (dC-dA)n.(dG-dT)n which can be used as genetic markers. Primers based on these sequences can be used to detect these repeats, especially for use in e.g paternity or maternity testing, human genetic analysis such as linkage analysis of genetic disease, commercial animal or plant breeding or pedigree analysis. Clones containing the repeat sequences were isolated by hybridisation of chromosome-specific phage libraries with a synthetic poly(dC-dA). (dG-dT) probe. Over 100 repeat blocks were isolated. The primers AAT65798-T66047 were used to PCF amplify the inserts from the isolated clones containing the repeat sequences. The primers AAT66010-1 were used to amplify the repeat sequence marker clone Mfd107 (AAT65778). (Updated on 25-MAR-2003 to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   base -1569. They are used in a method for detecting cytochrome P4501A2 gene polymorphism, in partic. for detecting a base substitution at position -1569 and may be used with primers for the detection of a T to G base substitution at position 2064 and a C to A substitution at position 2640. The method is easy, convenient and has a high degree of sensitivity and accuracy. Polymorphisms in the P4501A2 gene can lead to a modification of metabolism which may be beneficial or deleterious

18-JUN-1997
                                                                                                                                       The invention relates to the isolation of polymorphic repeat sequences having the sequence (dC-dA)n. (dG-dT)n which can be used as genetic markers. Primers based on these sequences can be used to detect these repeats, especially for use in e.g paternity or maternity testing, huma genetic analysis such as linkage analysis. Clones containing the animal or plant breeding or pedigree enalysis. Clones containing the repeat sequences were isolated by hybridisation of chromosome-specific phage libraries with a synthetic poly(dC-dA). (dG-dT) probe. Over 100 repeat blocks were isolated. The primers AAT65798-T66047 were used to pamplify the inserts from the isolated clones containing the repeat sequences. The primers AAT66016-7 were used to amplify the repeat sequence marker clone Mfd110 (AAT65781). (Updated on 25-MAR-2003 to
                                                                                                    Sequence 20
                                                                                                                                                                                                                                                                                                                                        Detection of polymorphic genetic markers of the form (dC-dA)n(dG-dT)n using novel nucleic acid mols. as primers.

                                                                                                                                                                                                                                                                       The present sequence represents a sequence tagged site (STS) primer used in the isolation of cosmids from the DPC4 is a tumour suppressor CC locus 4) region, and gene identification. DPC4 is a tumour suppressor CC gene. Detection of truncated DPC4 protein, or of homozygous deletions or intragenic mutations in the nucleic acid encoding it, is used to diagnose CC (in vivo or in vitro) proliferative diseases, especially pancreatic carcinoma, bile duct, bladder or colorectal cancer, Crohn's disease, CC colitis-associated neoplasia or chronic ulcerative colitis. These conditions, where associated with a homozygous deletion, can be treated by administering an agent that: (a) modulates DPC4 expression.

CC specifically a sense DPC4 sequence (particularly in the form of a vector, i.e. by gene therapy), but also an antisense sequence where DPC4 protein is over expressed or (b) mimics the activity of DPC4. DPC4 nucleic acid is also used as hybridisation probes for detecting presence/absence of thuman chromosome 18q21.1 fragments. When a homozygous deletion is CC detected in this region, an agent can be administered that accumulates within, or kills, only cells which contain such a deletion. This agent can be capablouring gene and lost by the deletion, i.e. it has a highly considered as hybridisation probes for other protein) encoded by a mention of the protein and a significant contains such a deletion.

                                                                                                                                                                                                                                                                                        The present invention describes LRP5 (low density lipoprotein (LDL) receptor related protein, previously designated LRP-3). AAV85587 to AAV85822 represent exon primers used for obtaining LRP5 cDNA. Nucleic acid molecules (NAMS) encoding LRP5 can be used for determining if an individual is susceptible to insulin dependent diabetes mellitus (IDDM). The NAMS or proteins can be used for reducing triglyceride levels in the serum of an individual. Therapies that affect LRP5 may also be useful in the treatment of autoimmune diseases such as glomerulonephritis, diseases and disorders involving disruption of endocytosis and/or antigen presentation, cytokine clearance and/or inflammation, viral infection, pathogenic bacterial toxin contamination, elevation of free fatty acids or hypercholesterolemia, type 2 diabetes, osteoporosis, Alzheimer's disease and cardiovascular disease.
